Frontend developer with 4+ years building web applications for public and private institutions. I work primarily in React and TypeScript, and I own the path to production: Node.js services in Docker, Python data pipelines, and Linux deployment behind nginx. Most recently I built the digital platform for Colima's state anti-corruption system, including an OAuth 2.0 integration with Mexico's National Digital Platform.

PROFESSIONAL EXPERIENCE

Full-Stack Developer

Secretaría Ejecutiva del Sistema Anticorrupción del Estado de Colima · Colima, Mexico · January 2025 – August 2026

- Built and shipped the State Digital Platform, the public-facing system for the state's anti-corruption transparency obligations, from frontend to production deployment.
- Built a Node.js/Docker microservice that syncs ~20,000 records to Mexico's National Digital Platform via an OAuth 2.0 API, replacing an unstable upsert key with a deterministic one to eliminate duplicates.
- Designed Python ETL pipelines that extract, normalize and load ~2,500 records into MongoDB; found and fixed a silent bug that was dropping three required fields from every record.
- Administered the production Linux server running five services in Docker behind nginx, and wrote the technical documentation the team relies on: READMEs, integration guides and handoff docs.

Frontend Developer

Forentec · Colima, Mexico · January 2024 – November 2024

- Developed a web platform with Ruby on Rails and JavaScript, owning the full interface layer.
- Implemented geospatial data visualization with Google Maps and GeoJSON to make location data readable for non-technical users.
- Redesigned key UI flows to improve usability and reduce friction in daily use.

Frontend Developer

Tecnológico Nacional de México, Campus Colima · Colima, Mexico · January 2022 – December 2023

- Built a psychometric testing platform used to evaluate students, covering test delivery, scoring and results.
- Collected and analyzed the resulting data to support academic performance initiatives.

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3/SCSS, Tailwind CSS, Bootstrap, Storybook, Vite

Backend: Node.js, Express, Python, REST APIs, OAuth 2.0

Data: MongoDB, MySQL, ETL pipelines

Infrastructure: Docker, Linux, nginx, Cloudflare, Git/GitHub

EDUCATION

Bachelor's Degree in Computer Systems Engineering — GPA 3.7

Tecnológico Nacional de México, Campus Colima · 2019 – 2024

LANGUAGES

Spanish: Native

English: B2 (Upper-Intermediate)
